

Lisa's Coffee Chain Analysis

PROJECT: Lisa's Coffee Chain Analysis

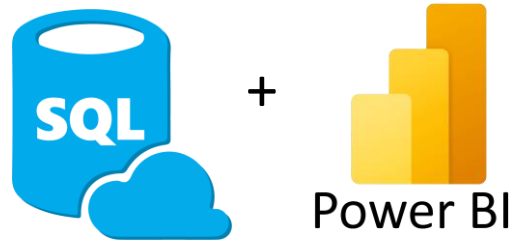

Lisa's Coffee Chain has 3 functional outlets that sell coffee and tea products with pastry items in the outlet

Coffee chain's customer information, sales data, outlet information and pastry inventory data have been provided to derive some insights, design dashboards and solve their business problems with the available data.

Skills Required:

- Data Cleaning
- Data Analysis
- Pivoting in SQL
- Power Query
- Dashboard Design

Tools Used:

Data Source:

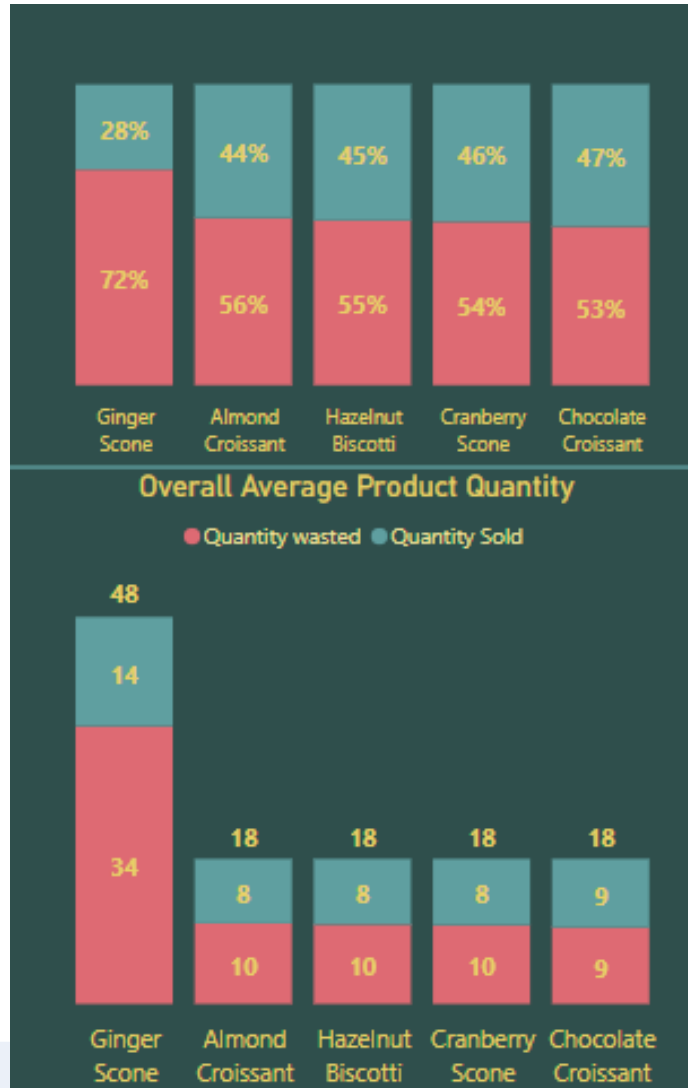

- Kaggle
<https://www.kaggle.com/datasets>

Understanding the Requirements

Lisa's Coffee chain has the following requirements with the provided data.

- To manage and reduce daily wastage on their pastry products.
- To understand and visualize their top-selling products and their sales.
- To analyze and understand their potential customer groups.
- Dashboard for Pastry Inventory management.
- Sales Report Dashboard

Pastry Inventory Analysis

Observation:

- On average **more than 50% is wasted** each day per pastry product.

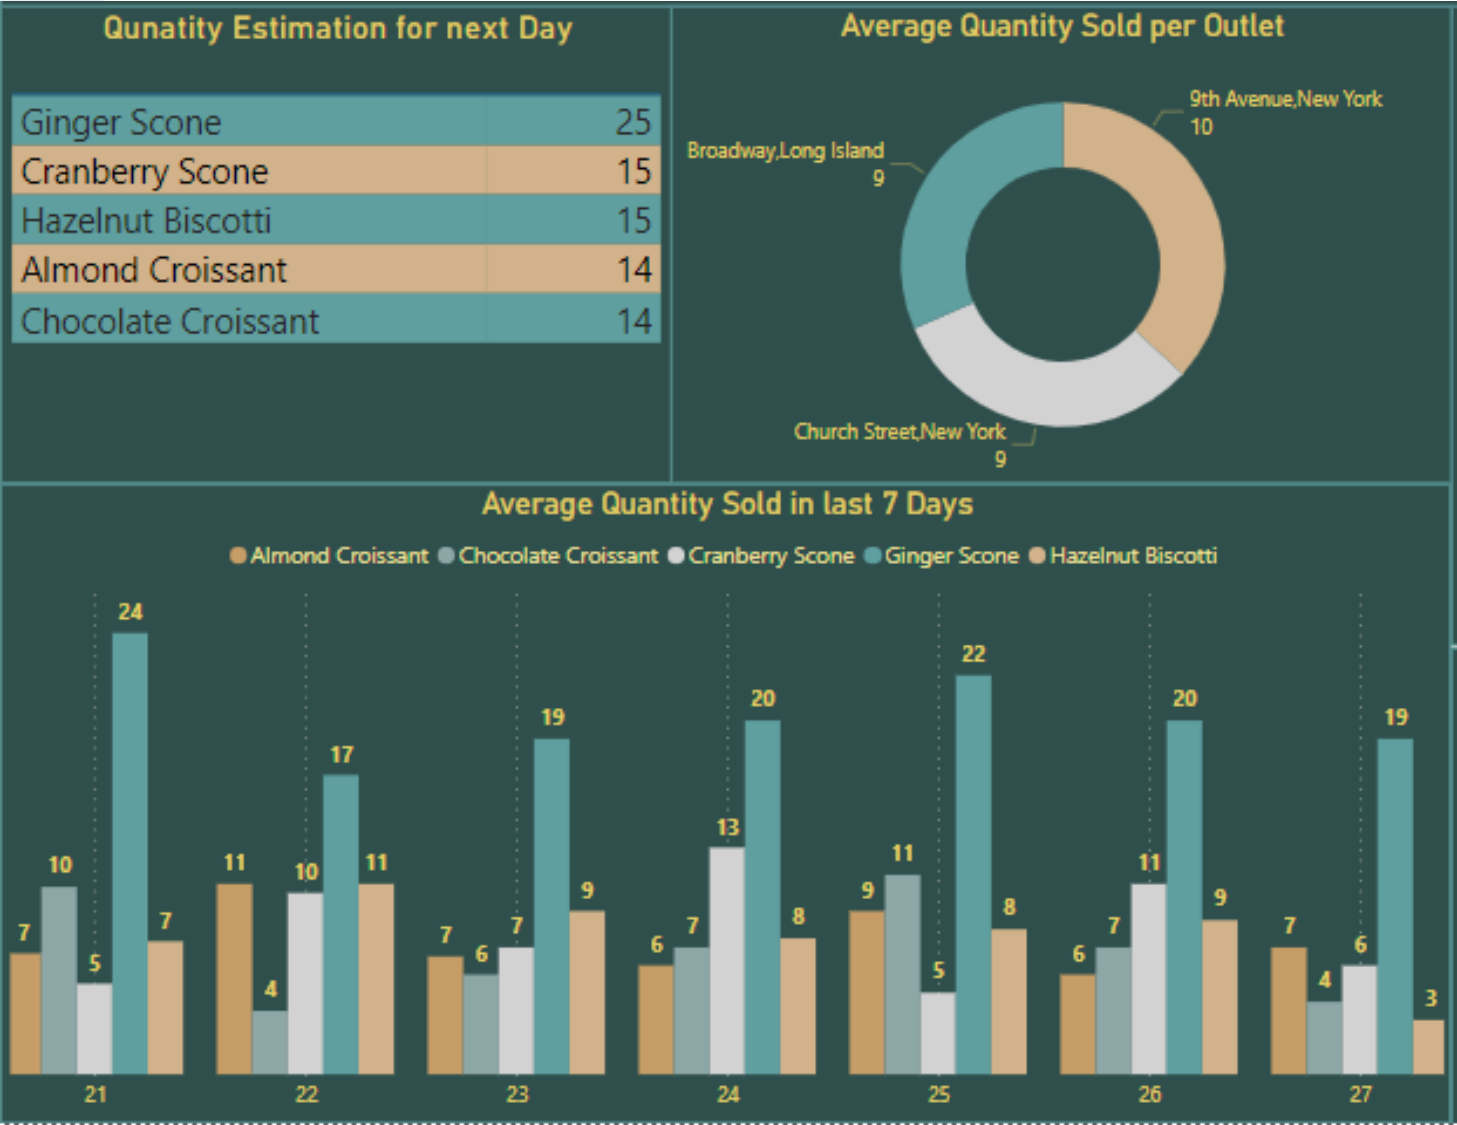

Cause of the Problem:

- The same quantity of products is made each day not considering the products sold earlier.

Solution:

- To consider the past few days' sales per product and make the required quantity to reduce or avoid wastage.

Pastry Inventory Management Solution:

- Custom measure is added in the dashboard to estimate the quantity to be made.
- Past 7 days pastry sales can be visualized.
- This will decrease the wastage to less than 15%
